

Lighting Design - John Deserves to Die

I had a unique challenge during John Deserves to Die. It was performed in $\frac{3}{4}$ round on the floor of the theater, which reduced our possible hang positions significantly.

I used color temperature and edge quality to highlight the variable tensions that happen between characters during the show.

Parrot Puppet - Treasure Island

I built a parrot puppet for my school's production of Treasure Island. The parrot's body is felt stretched over amateur wire and foam, and the beak is papier-mache.

Below: Scenes from wonderland.

Lighting Design - Alice By Heart

I was the lighting designer for my school's production of Alice by Heart. I used the lights to emphasize the contrast between the real world and Alice's imagination.

Photo Credit: Julian Parker Burns

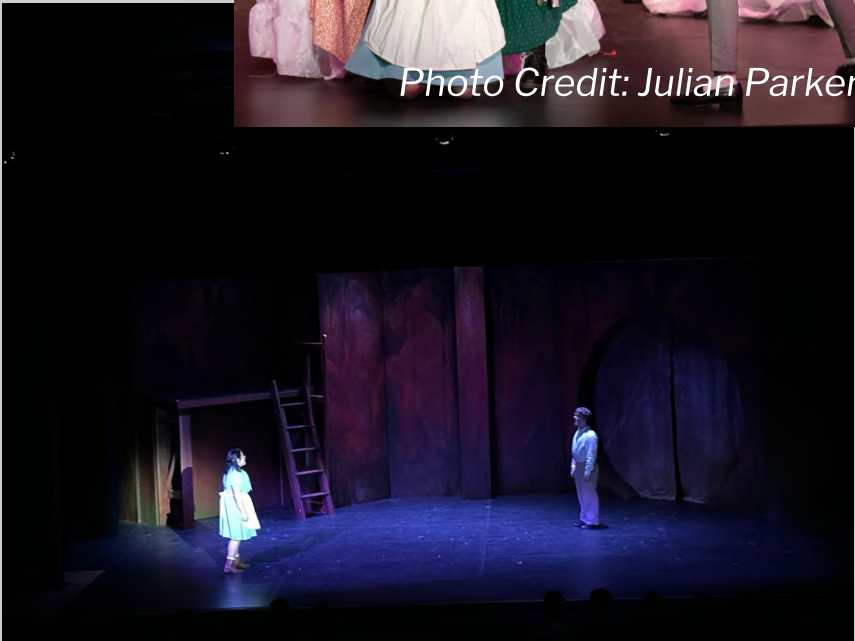

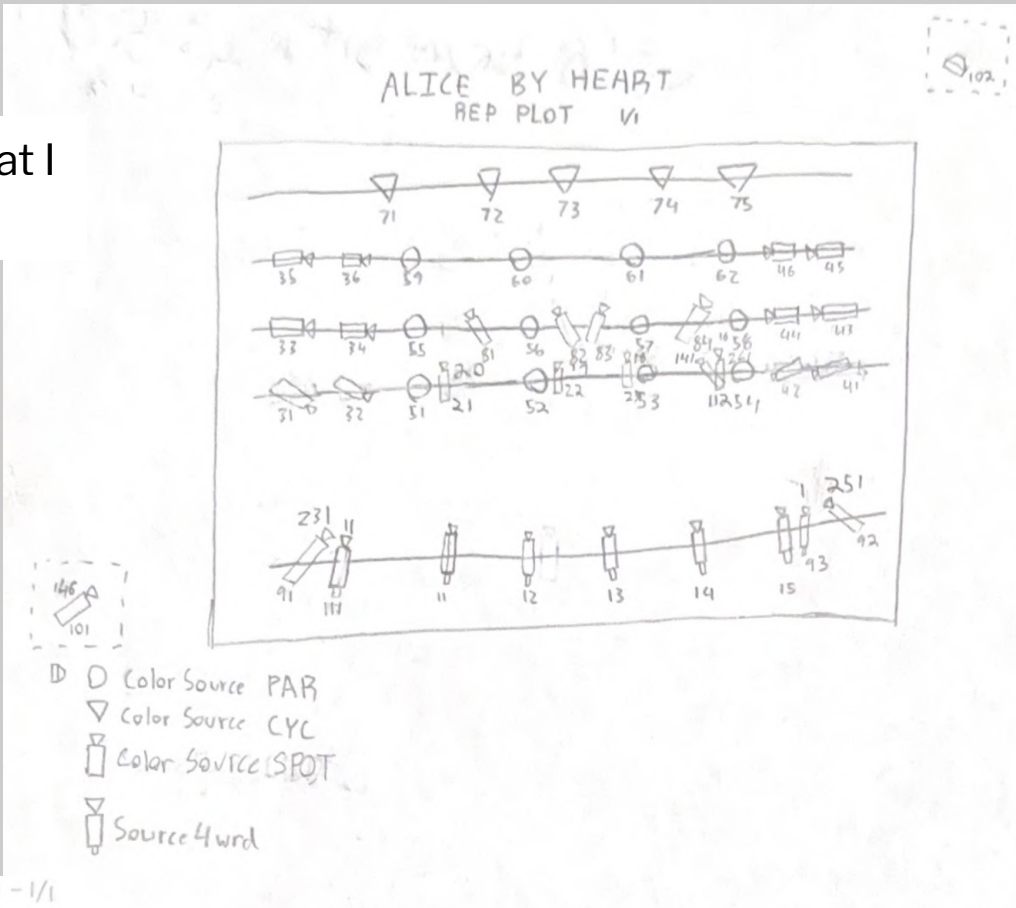

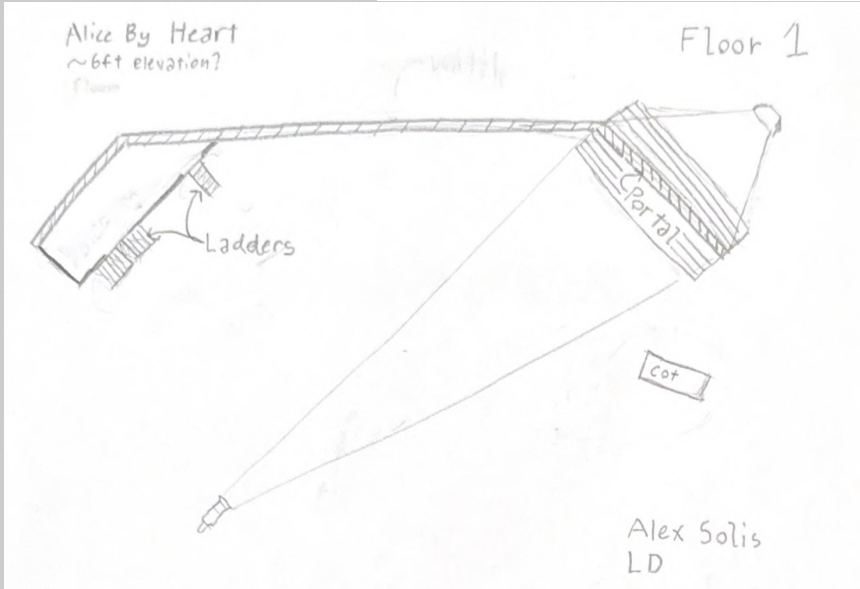

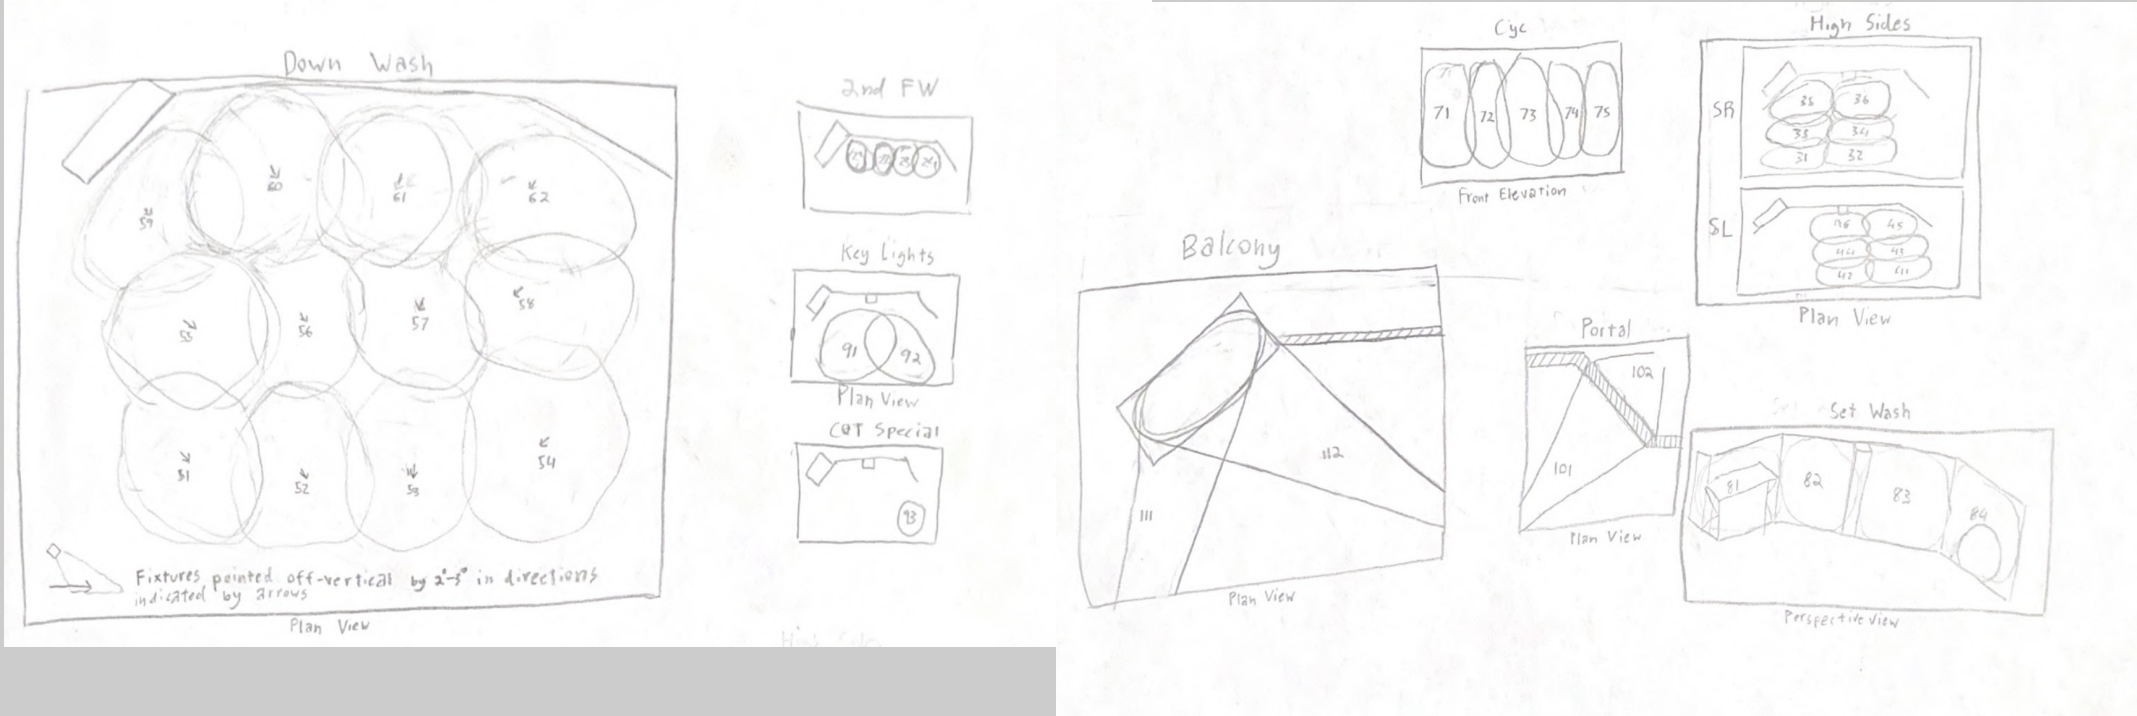

Photo Credit: Julian Parker Burns

Below are the light plots that I made for the show.

Alice By Heart - Magic Sheets - 1/1

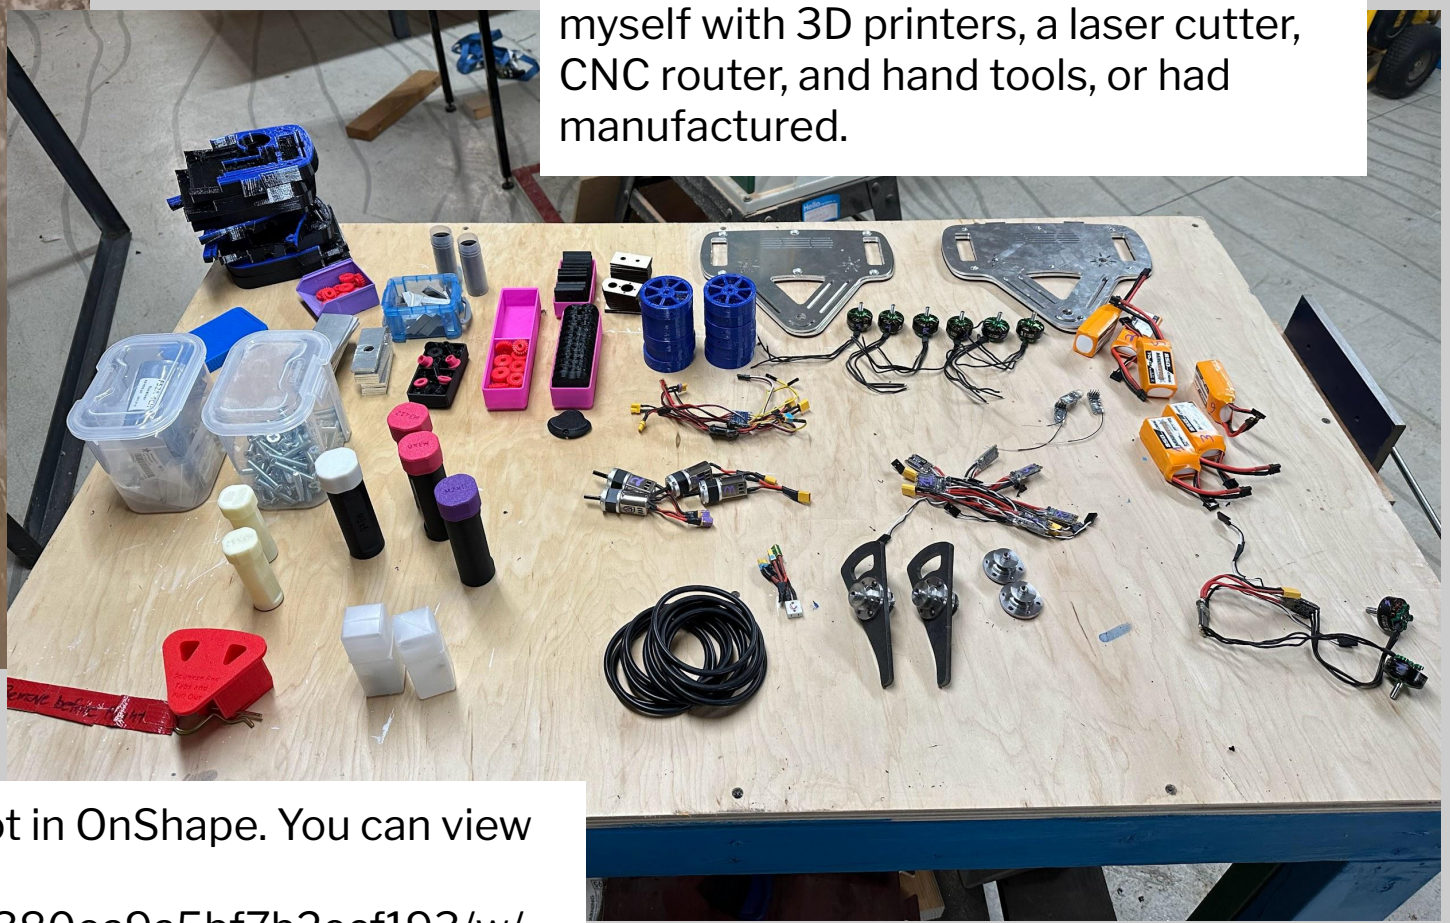

Combat Robot

I worked with a friend to design and build a combat robot for the National Havoc Robot League.

Our robot is a two-wheeled, invertible, horizontal spinner with a theoretical maximum speed of over 15,000 RPM.

The robot has a total of 97 individ parts. Some are off-the-shely components, but many of them are custom parts that I designed and either fabricated myself with 3D printers, a laser cutter, CNC router, and hand tools, or had manufactured.

I did all of the CAD design for the robot in OnShape. You can view the complete design at cad.onshape.com/documents/7b9e0380ea9a5bf7b2ecf193/w/0419c64438c575769c294494/e/4f67d6fe28c8eec2e034a99d

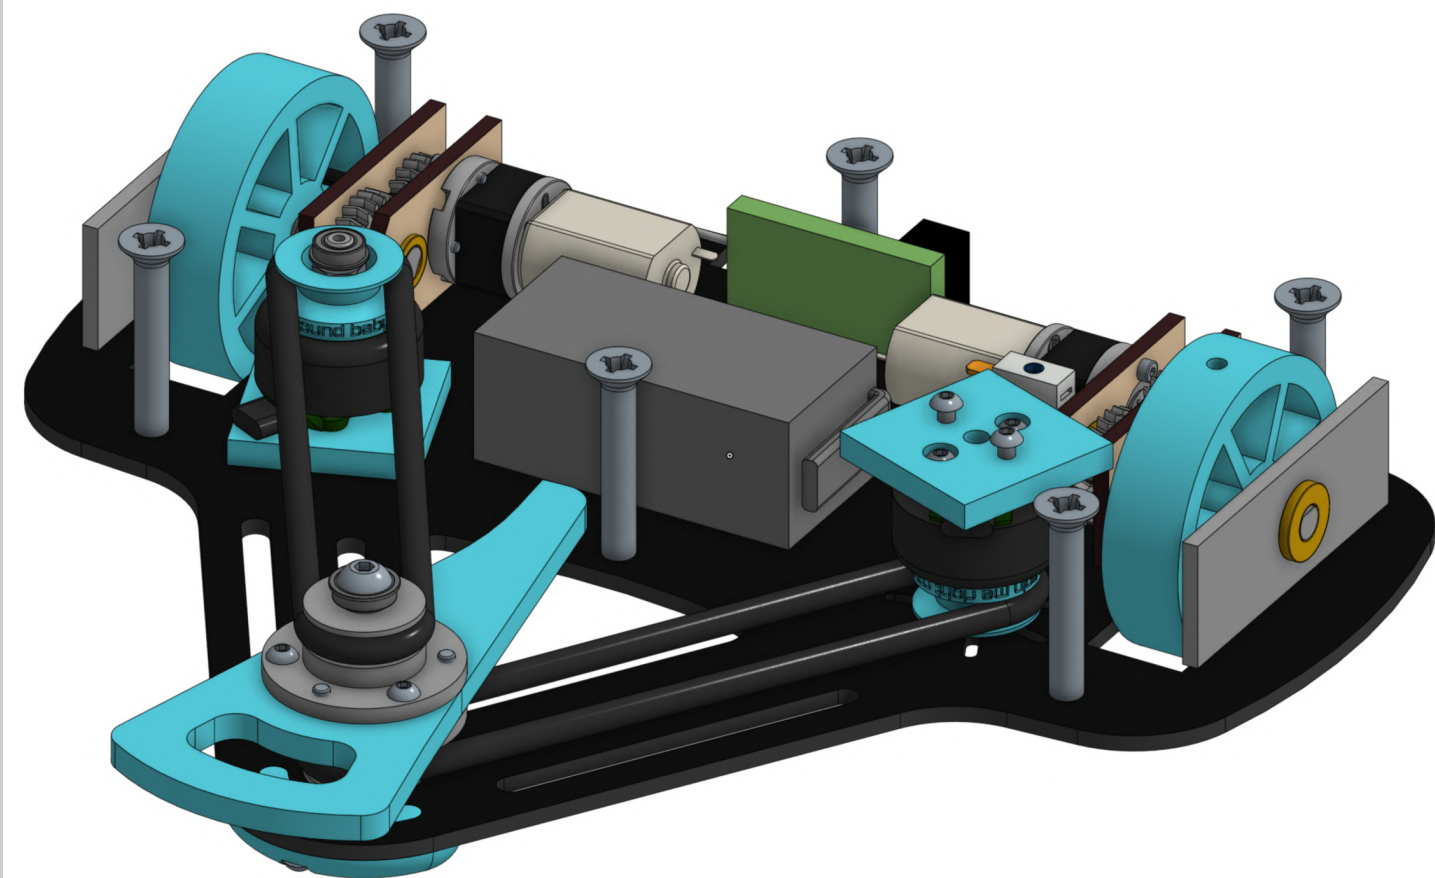

Photo Credit: Julian Parker Burns

Beholder Puppet - She Kills Monsters

I designed a human scale beholder puppet for my school's production of She Kills Monsters. I was also the stage manager for the production.

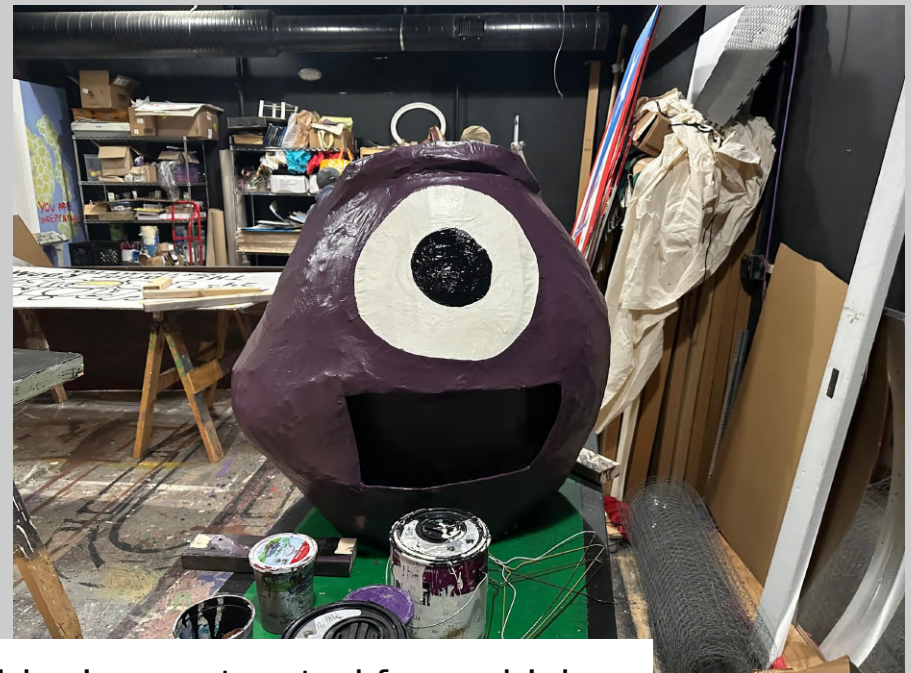

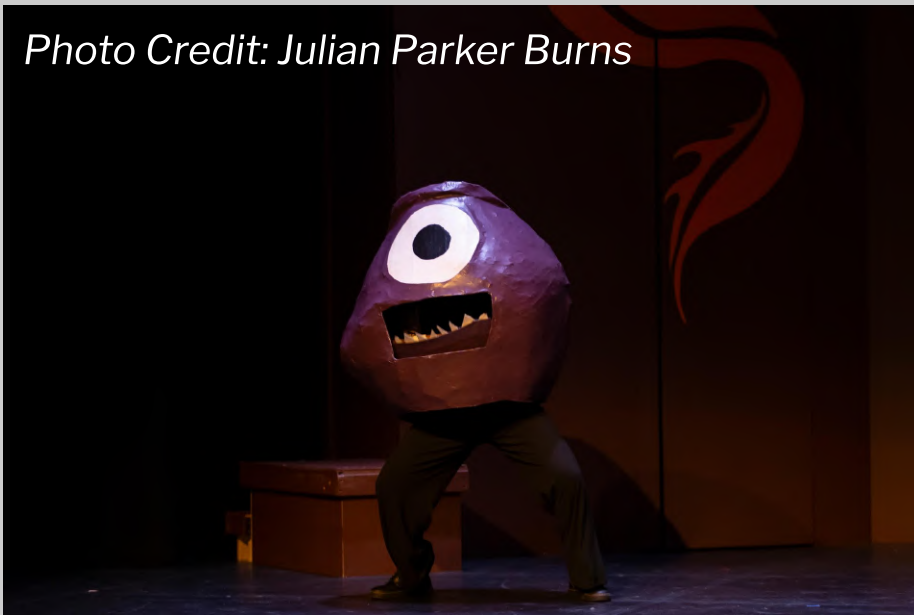

Photo Credit: Julian Parker Burns

The beholder is constructed from chicken wire and papier-mache, with handles inside and an articulated mouth.

Stage Management - Eurydice

I worked on a senior capstone production of Eurydice during my junior year. I was the stage manager, constructed the set, and designed the lights.

EURYDICE

17

Set on water pump &

Scene 3

lights 90 go

*Eurydice, by a water pump.
The noise of a party, from far off.*

EURYDICE. I hate parties.

And a wedding party is the biggest party of all.
All the guests arrived and Orpheus is taking a shower.
He's always taking a shower when the guests arrive so he doesn't have to greet them.
Then I have to greet them.

A wedding is for daughters and fathers. The mothers all dress up, trying to look like young women. But a wedding is for a father and a daughter. They stop being married to each other on that day.

I always thought there would be more interesting people at my wedding.

She drinks water from the water pump.

The Nasty Interesting Man, wearing a trench coat, appears and sees Eurydice cupping her hands full of water.

MAN. Are you a homeless person?

EURYDICE. No.

MAN. Oh, I'm on my way to a party where there are really very interesting people. Would you like to join me?

EURYDICE. No. I just left my own party.

MAN. You were giving a party and you just - left?

EURYDICE. I was thirsty.

MAN. You must be a very interesting person, to leave your own party like that.

EURYDICE. Thank you.

MAN. You mustn't care at all what other people think of you. I always say that's a mark of a really interesting person, don't you?

EURYDICE. I guess.

MAN. So would you like to accompany me to this interesting affair?

who answers the door at parties... A man with big hands, with big stupid hands like potatoes, a man who can carry a cow in labor.

The man harks Eurydice against the wall.

MAN. My lips were meant to kiss your eyelids, that's obvious!

EURYDICE. Close your eyes, then!

He closes his eyes, expecting a kiss.

She takes the letter from his breast pocket.

She slips under him and opens the door to the stairwell.

He opens his eyes.

She looks at the letter.

EURYDICE. It's his handwriting!

MAN. Of course it is!

He reaches for her.

EURYDICE. Good-bye.

She runs for the stairs.

She waves, off-balance, at the top of the stairwell.

MAN. Don't do that, you'll trip!

EURYDICE. Orpheus!

From the water pump:

ORPHEUS. EURYDICE!

She runs, trips and pitches down the stairs, holding her letter.

She follows the letter down, down down...

Blackout. A cluster. Strange sounds - xylophones, brass bands, sounds of falling, sounds of cortège.

Sounds of breathing.

Sound 10 go

lights 155 go

lights 160 go

Sound 165 go

lights 165 go

lights 170 go

SECOND MOVEMENT

The underworld.

There is no set change.

Strange watery noises.

Drop, drip, drip.

The movement to the underworld is marked by the entrance of stones.

(EV) (SM) (EL) → SL

Scene 1

THE STONES. We are a chorus of stones.

LITTLE STONE. I'm a little stone.

BIG STONE. I'm a big stone.

LOUD STONE. I'm a loud stone.

THE STONES. We are all three stones.

LITTLE STONE. We live with the dead people in the land of the dead.

BIG STONE. Eurydice was a great musician. Orpheus was his wife.

LOUD STONE. (correcting Big Stone.) Orpheus was a great musician. Eurydice was his wife. She died.

LITTLE STONE. Then he played the saddest music.

Even we -

THE STONES. The stones -

LITTLE STONE. Cried when we heard it.

The sound of three drops of water hitting a pond.

LITTLE STONE. Oh, look, she is coming into the land of the dead now.

BIG STONE. Oh!

EURYDICE

71

She dips herself in the river.

A small metallic sound of fingerfulness - ping.

The sound of water.

She lies down next to her father, as though asleep.

The sound of an elevator - ding.

Orpheus appears in the elevator.

He sees Eurydice.

He is happy.

The elevator starts raining on Orpheus.

He forgets.

He steps out of the elevator.

He sees the letter on the ground.

He picks it up.

He scrutinizes it.

He can't read it.

He stands on it.

He closes his eyes.

The sound of water.

Then silence.

The end.

Sound 31 go

Sound 32 go

lights 450 go

These are some excerpts from my cue script that I called the show with.

Set - Eurydice

I worked on a senior capstone production of Eurydice during my junior year. I was the stage manager, constructed the set, and designed the lights.

The set for the show included an elevator (top right), a room made of string (center right), and a water pump (bottom right).

Lighting Design - Eurydice

I worked on a senior capstone production of Eurydice during my junior year. I was the stage manager, constructed the set, and designed the lights.

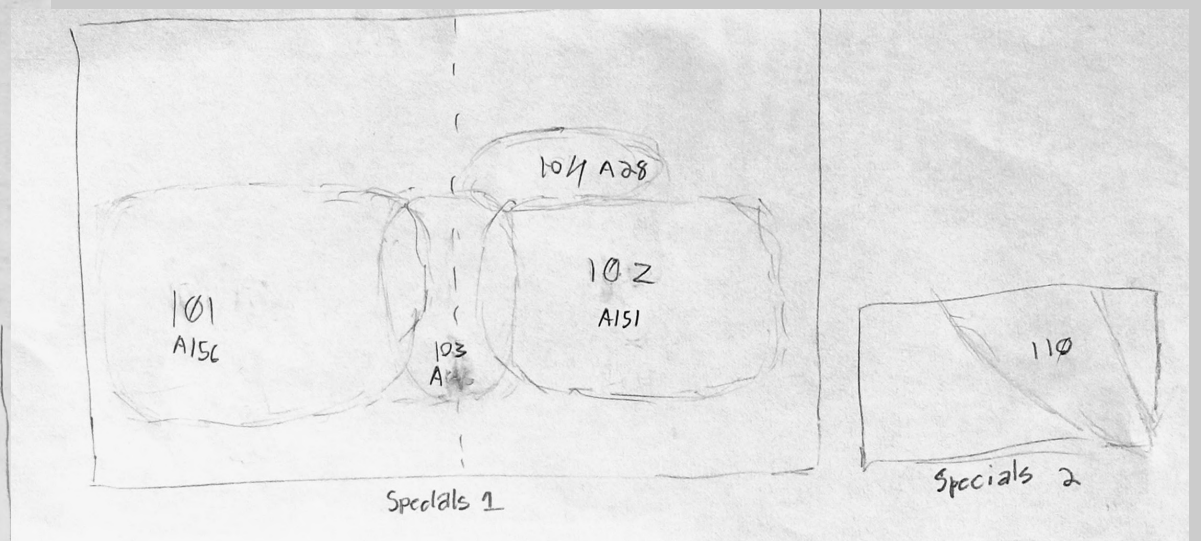

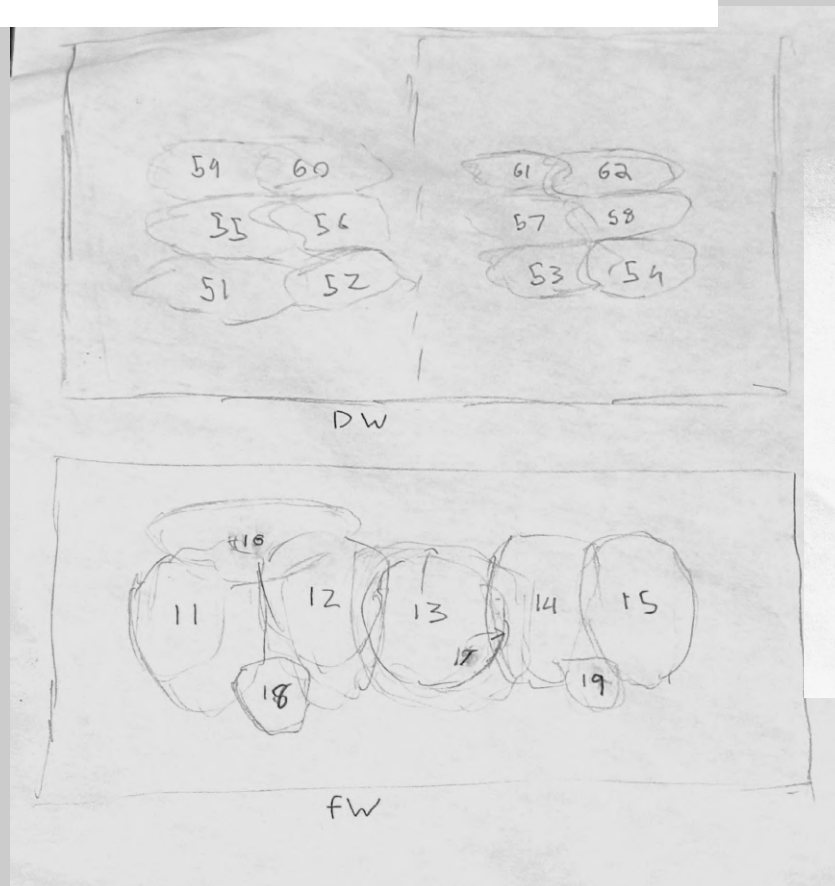

The lighting accentuated the distance between the world of the living and the underworld, by separating the stage into distinct sections.

Practical Light Rig - Outbound

I worked on a device to light up on a character's chest for a senior capstone production in the spring semester of my senior year. I was also the stage manager for the production.

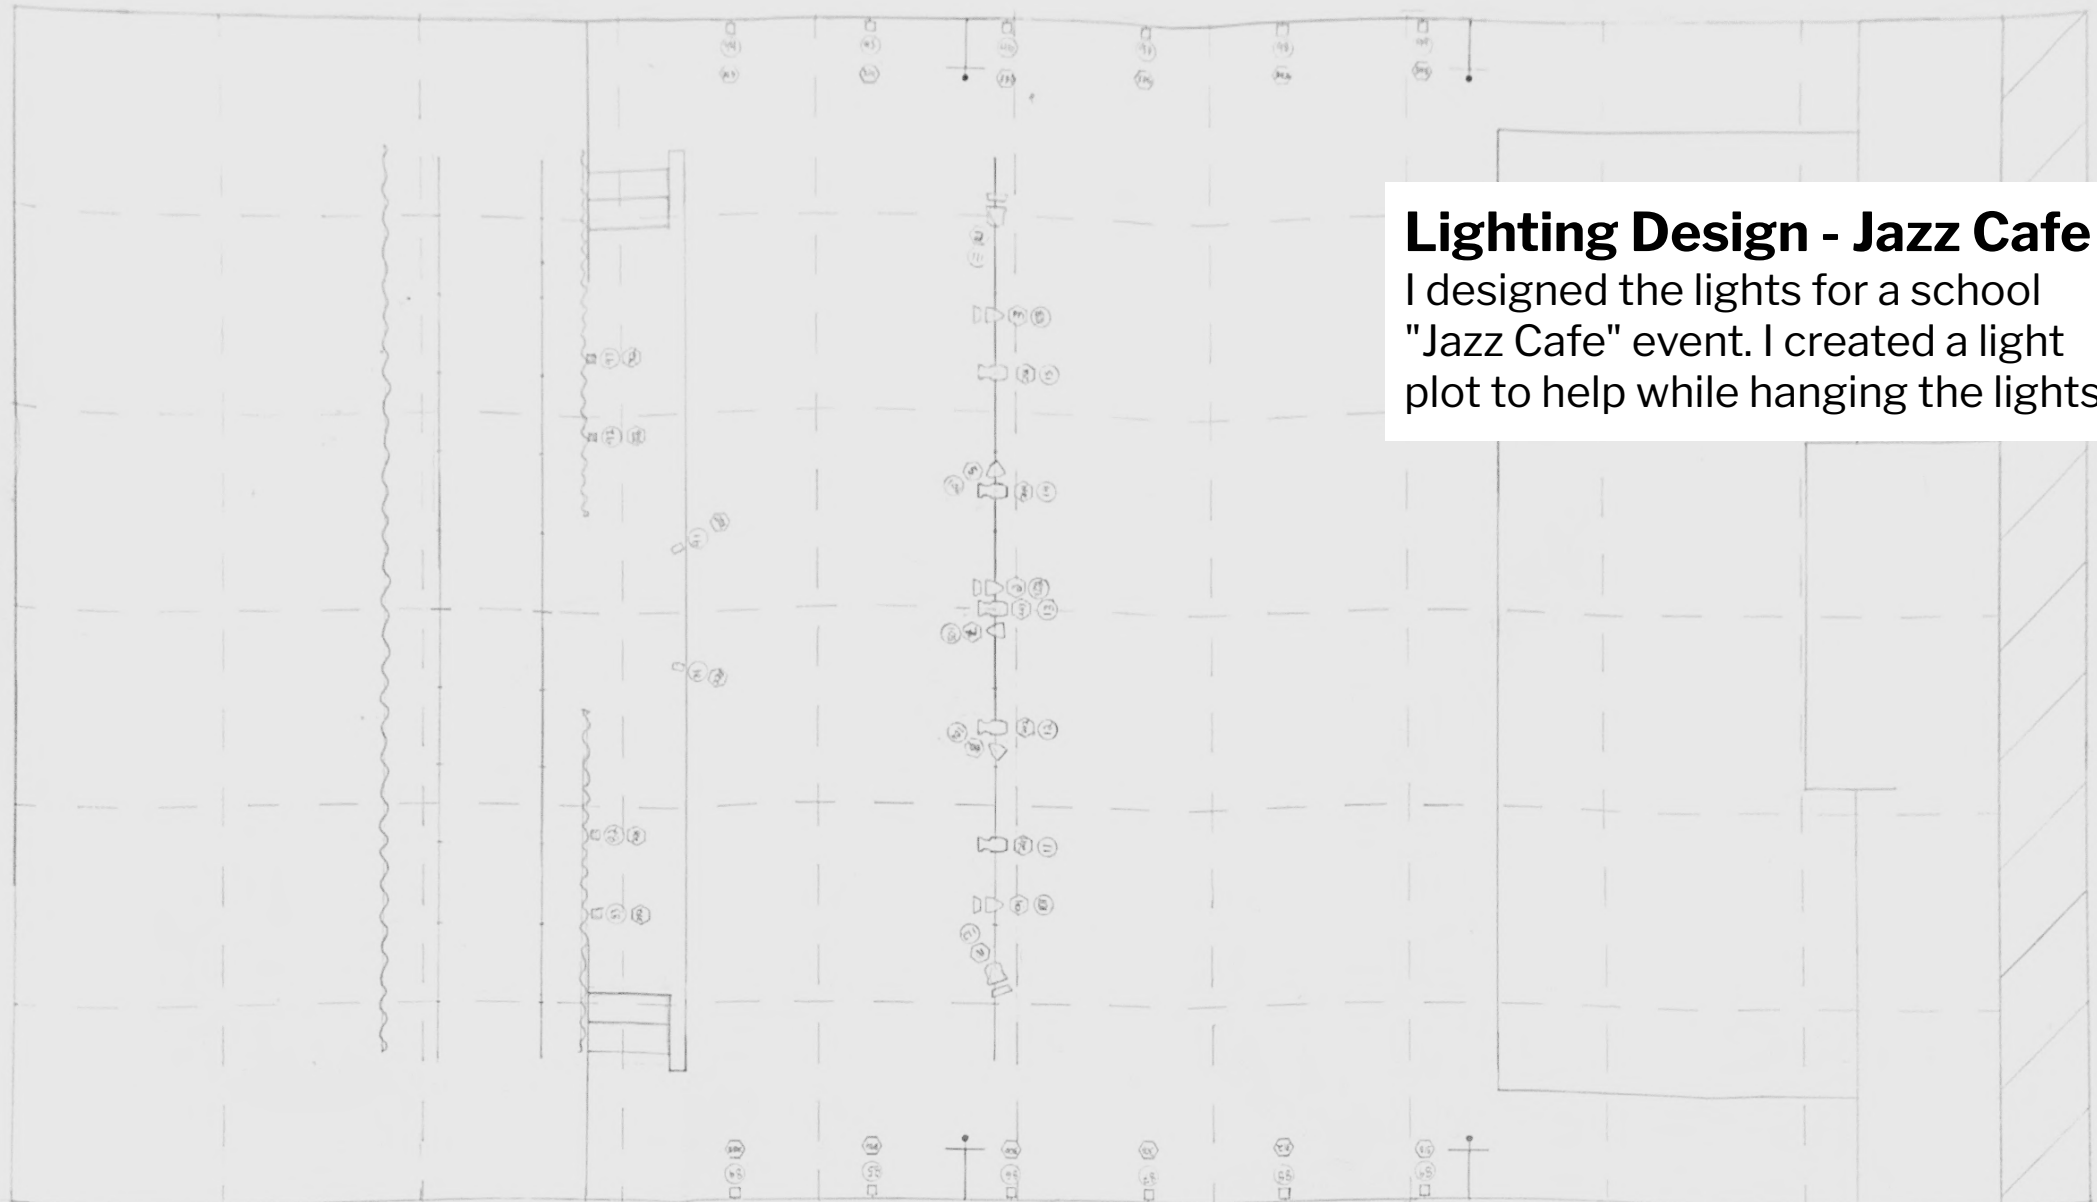

My device uses an ESP32 on a custom circuit board to listen for OSC signals, which allows it to be controlled from QLab.

Lighting Design - Jazz Cafe

I designed the lights for a school "Jazz Cafe" event. I created a light plot to help while hanging the lights.

The Witch King of Angmar

I dressed up as the Witch King of Angmar from The Lord of the Rings for Halloween in 2024. The mask was 3D printed, covered with drywal compound, sanded, and then painted. I made the pauldrons out of EVA foam and thermoplastic.

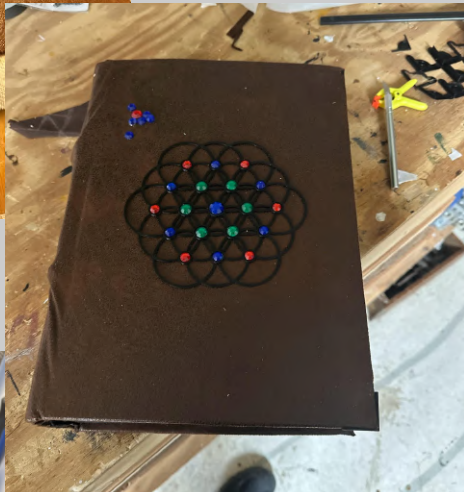

Lighting Design - SHOW Circus

I have designed and run lights and sound for the annual SHOW Circus Gala for the past three years. These are pictures from the most recent show. For this show, I had fun playing with the way that the performers cast shadows.

Properties - The Tempest & Julius Caesar

I have built a few props for Shakespeare plays that I have been a part of.

Prospero's Book - The Tempest

I created Prospero's magic book for a production of the Tempest. I was also a part of the cast, and played Stephano.

Spears - Julius Caesar

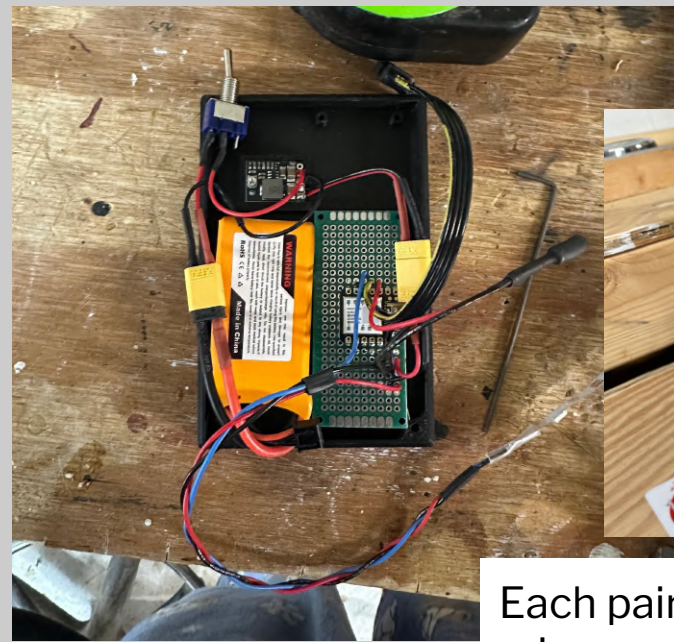

I created spears for a production of Julius Caesar. In addition, I was in the cast playing Julius Caesar.

I made a miniature version to test the shape of the 3D printed spearhead.

Stilt Lights - SHOW Circus

I was asked to design a lighting effect for a stilt act in a circus show.

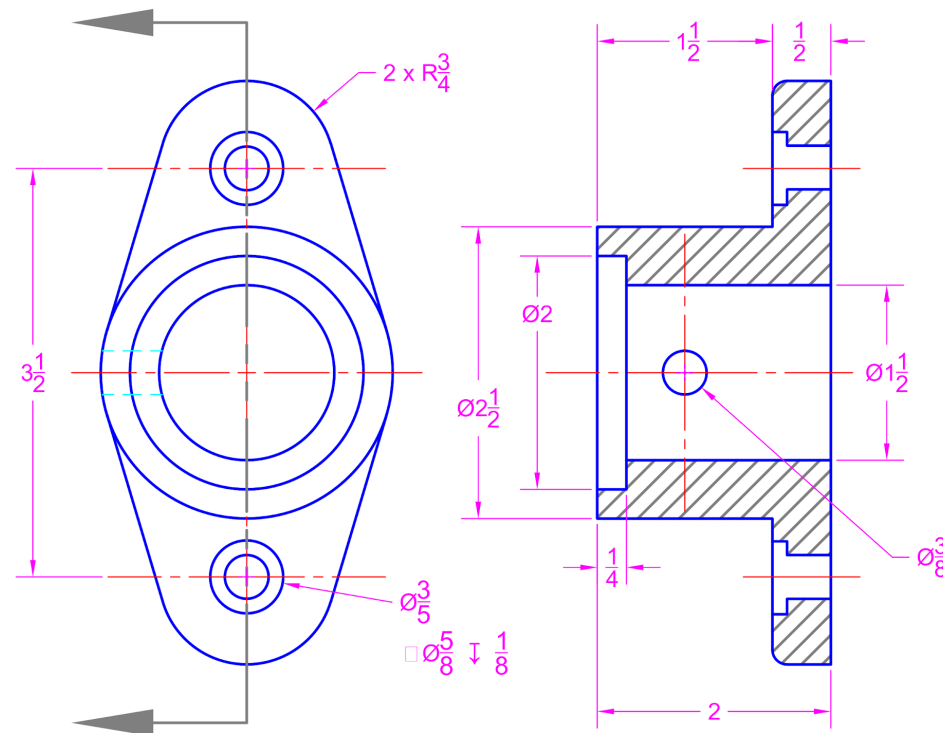

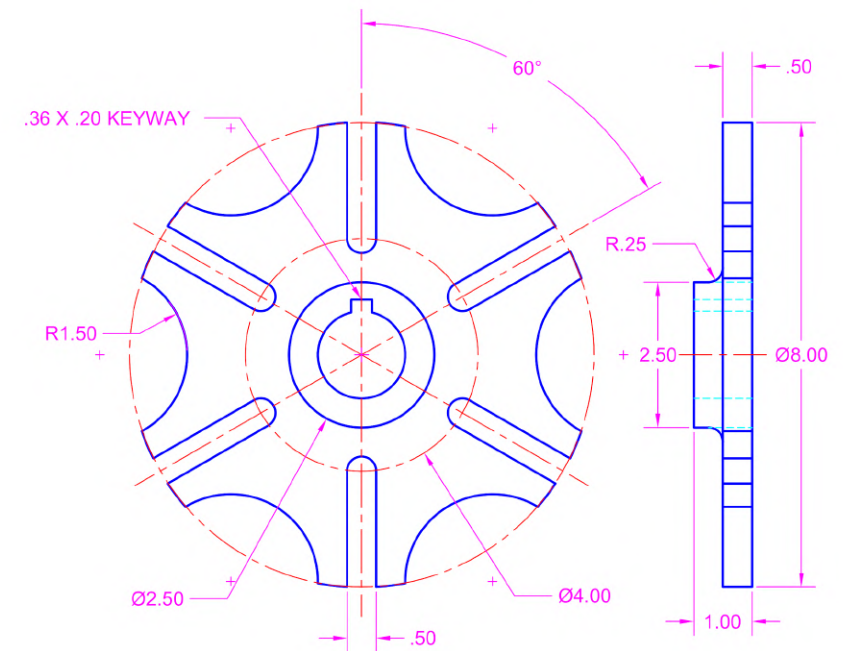

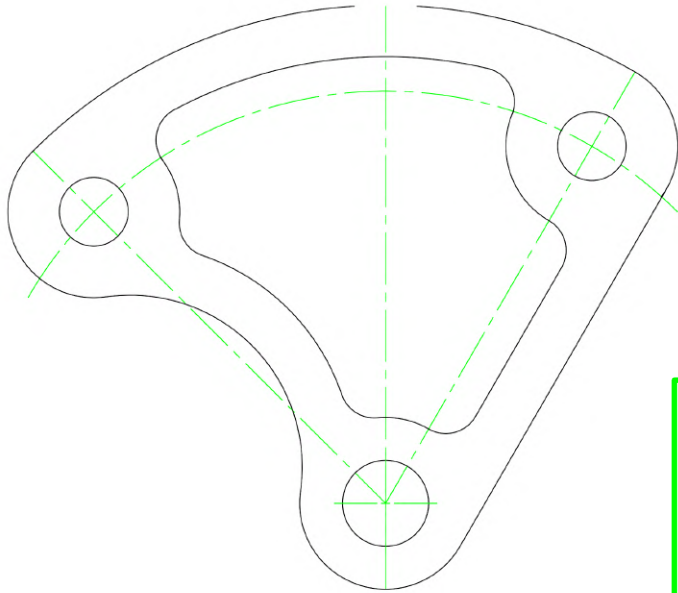

Each pair of stilts had a battery, microcontroller, and power switch, along with a vibration sensor so that the lights could react to the stilters' steps

CAD - Massasoit CC

During junior year, I took an AutoCAD class at Massasoit Community College. These are some of the drawings that I made during the class.

All Fillets and Rounds $R\frac{1}{8}$

Sound Design - Rhinoceros

I designed the sound for a senior capstone production of Rhinoceros. Real rhinos do not make very much noise, but the director wanted them to sound large and scary. To make the sounds, I used a mixture of different animal sounds, including horses, pigs, and elephants.

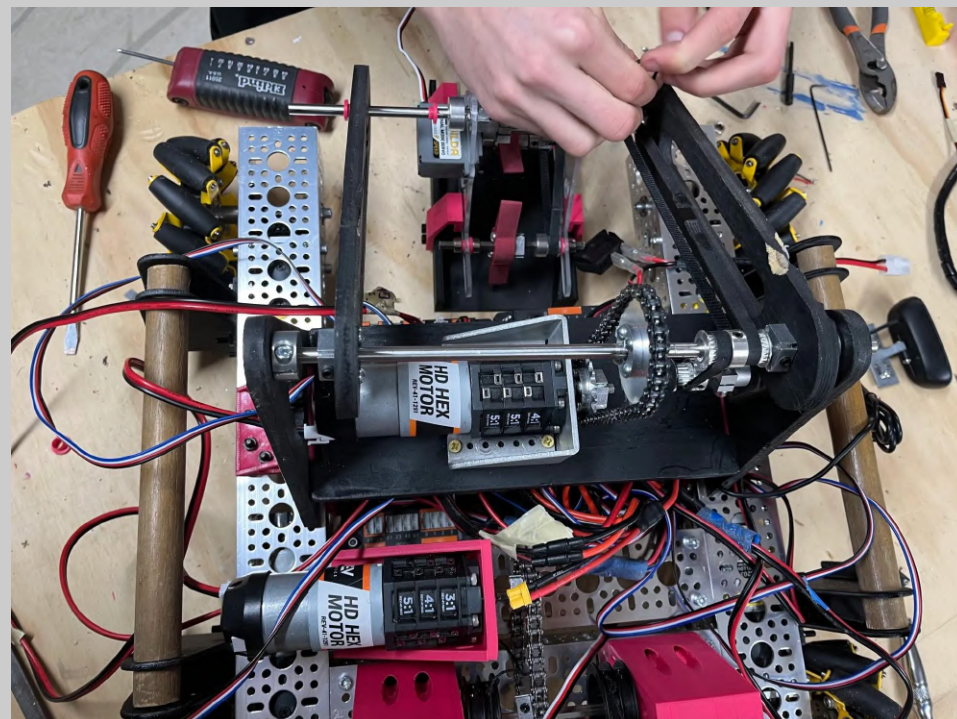

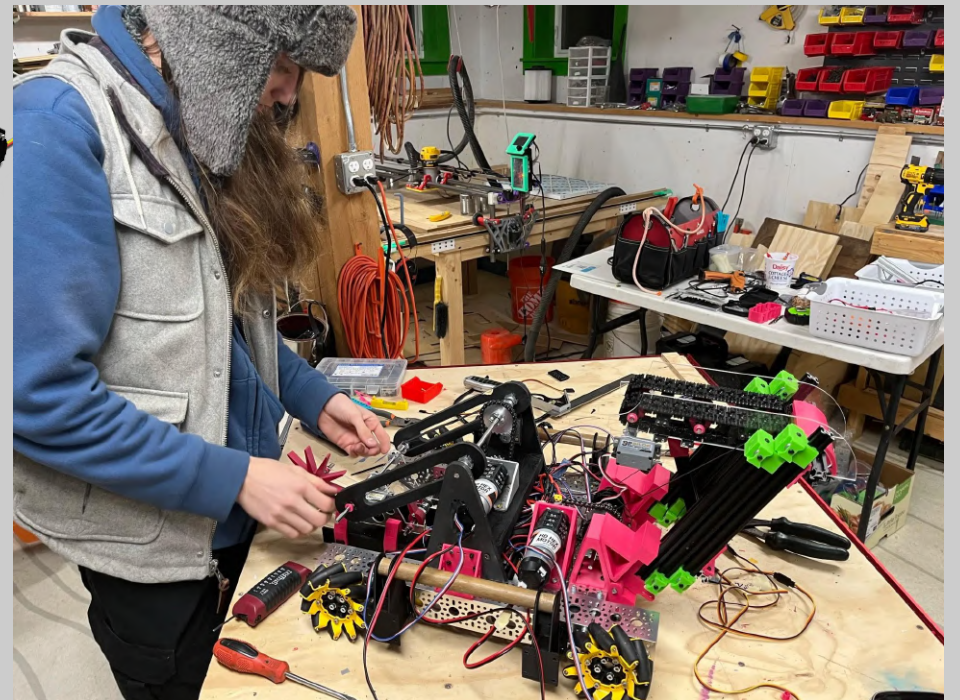

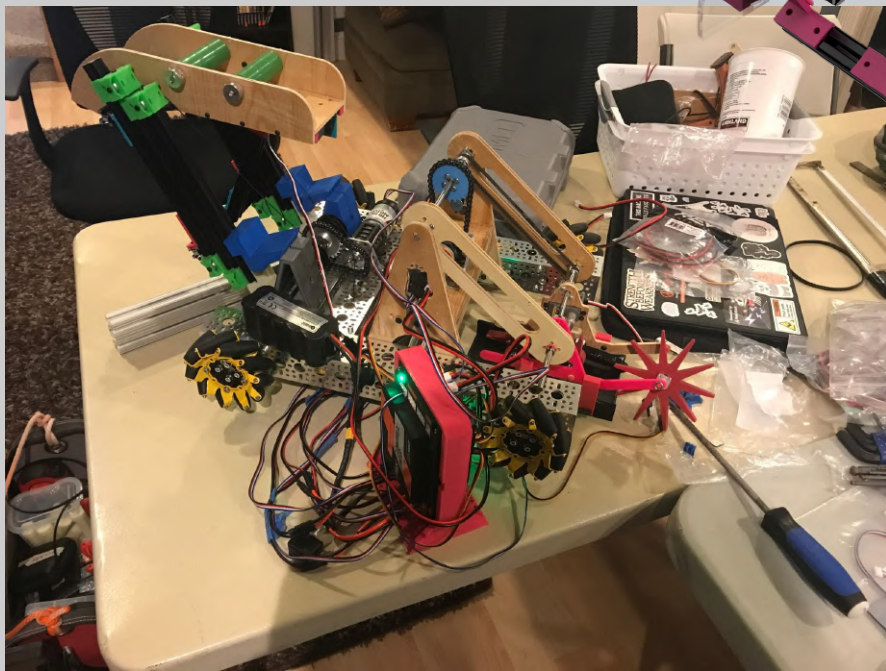

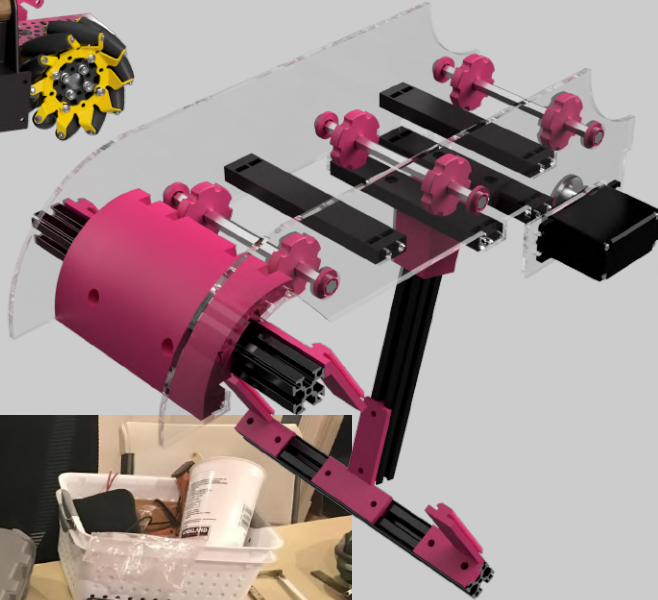

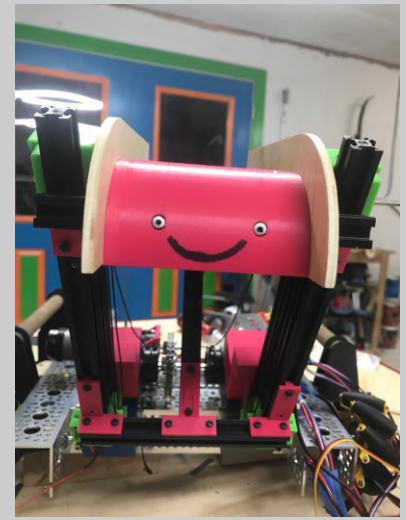

Audio does not embed very well into PDFs, so you can listen to some of the rhinoceros sounds on my website.

<https://alexsol.is/portfolio/rhino-sounds>

CAD - First Tech Challenge

I spent 4 years on a First Tech Challenge robotics team. During that time, I did almost all of the hardware design Autodesk Fusion 360. Here are some 3D renders and photographs of our robot for the 2023-2024 season.

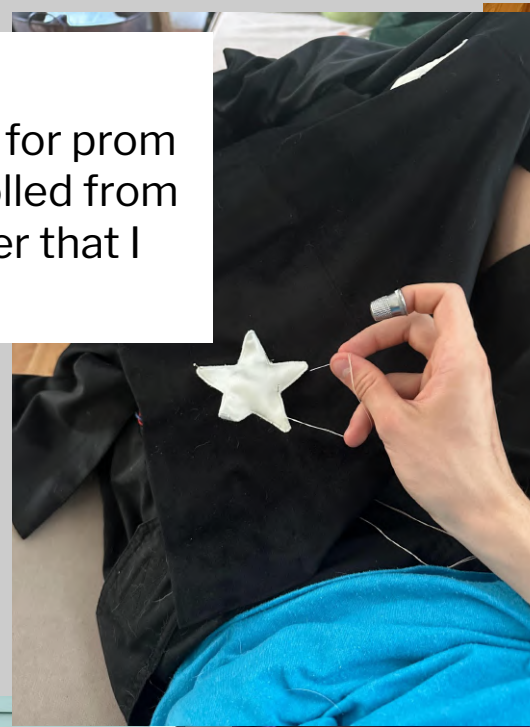

Light-up Jacket

I created a jacket with light up stars for prom in my junior year. Each star is controlled from within the jacket by a microcontroller that I programmed.

The biggest challenge with this project was get the the stars to diffuse the light well. I ended up using 3 different layers of fabric and a 3D printed spacer.

Oil Rig

I made this drawing to challenge my perspective and shading skills. I prioritized shading over linework for the majority of the piece.
